PROFESSIONAL SUMMARY

CS & Engineering graduate specializing in Cybersecurity and VAPT. Skilled in web app testing, network scanning, and ethical hacking using Burp Suite, Nmap, Metasploit, SQLMap, and Wireshark. Hands-on experience through VulnHub machines, TryHackMe labs, and CTF challenges. Seeking a Junior VAPT / InfoSec role.

TECHNICAL SKILLS

Languages: Python, Bash, PowerShell

OS: Kali Linux, Windows Server, macOS

Networking: TCP/UDP, OSI Model, DNS, VPN, Firewall, IDS/IPS

Cyber Tools: Nmap, Metasploit, Burp Suite, Wireshark, SQLMap, Nikto, Gobuster, Masscan, OpenVAS

Skills: Web App Pentesting, Network Pentesting, OSINT, Enumeration, Exploitation, Privilege Escalation

PROJECTS

- **Image Steganography Tool** — LSB encoding app embedding hidden payloads in PNG/BMP; 100% payload integrity, zero perceptible quality loss. Applicable to covert exfiltration and DLP-bypass analysis.
- **Secure Document Summarization Tool** (Major Project) — AI-powered Q&A system using Ollama LLM + RAG architecture; multi-format support (PDF, DOCX, TXT) with fully local secure processing.
- **Cybersecurity Portfolio Platform** — React + Vite + Tailwind CSS web app with modules on pentesting tools, crypto, cyber laws, and live RSS cybersecurity news feed.

CERTIFICATIONS & TRAINING

- **CEH** — EC-Council | **Penetration Testing Specialization** — Encrytecl Cyberguard | **Ethical Hacking from Scratch** — Udemy | **Network Fundamentals** — Encrytecl Cyberguard | **Cybersecurity Fundamentals** — Encrytecl Cyberguard | **Network Security** — Encrytecl Cyberguard
- **TryHackMe Labs:** OWASP Top 10 (SQLi, XSS, IDOR), OpenVAS, Splunk SIEM, Linux CLI, Advent of Cyber 2025 (24/24 challenges)
- **VAPT Practice** — **VulnHub Labs:** Independently solved 4 VulnHub machines covering full pentest methodology: enumeration → exploitation → privilege escalation → root.

Aragog — Nmap scan → Gobuster web enum → WordPress file inclusion exploit → root via misconfigured cron job

Nullbyte — Steganography credential extraction → SQL injection → local privilege escalation to root

RickdiculouslyEasy — Multi-flag CTF; anonymous FTP, misconfigured web dirs, Telnet/SSH flag extraction

VulnHub Basic Pentesting 1 — ProFTPD 1.3.3c Metasploit exploit → root via kernel privilege escalation

EDUCATION

BE in CSE — IoT, Cybersecurity & Blockchain

7.13 CGPA | 2025

Smt. Indira Gandhi College of Engineering, Ghansoli

HSC — Matoshree Prabodhini Jr. College Of Science

74.33% | 2021

SSC — Sau Laxmibai English Medium School

61.40% | 2019
